Option 1 — Brand-aligned (Aged Care Theme)

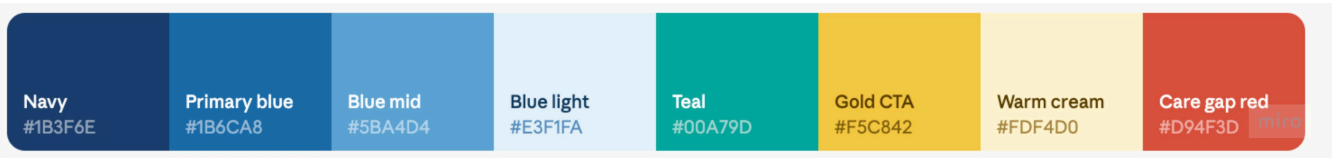

This palette is expressive and closely tied to a warm, human-centered identity.

Key characteristics:

- Purple spectrum (#3B1260 → #EDE4F6):
Creates a soft, caring, and slightly premium feel. Purple often signals compassion and dignity—important in aged care.
- Teal (#007B87):
Adds balance and a sense of trust and health.
- Amber CTA (#F5A623):
Warm and attention-grabbing, suitable for buttons and key actions.
- Warm cream (#FDF4D0):
Keeps the interface gentle and non-clinical.
- Care gap red (#D94F3D):
Highlights urgency or risk (e.g., unmet care needs).

Overall feel:

Friendly, empathetic, and brand-driven. It feels more like a care service platform than a formal system.

Option 2 — Formal / Government Ambience (Selected)

This palette shifts toward clarity, neutrality, and professionalism.

Key characteristics:

- Blue spectrum (#1B3F6E → #E3F1FA):
Blue communicates trust, reliability, and structure—very common in healthcare systems and government tools.
- Teal (#00A79D):
Keeps a healthcare tone while feeling slightly more modern and less emotional than the purple version.
- Gold CTA (#F5C842):
More restrained than amber—still noticeable but less “urgent” or aggressive.
- Warm cream (#FDF4D0):
Maintains readability and softness.
- Care gap red (#D94F3D):
Retained for alerts and critical signals.

Overall feel:

Structured, authoritative, and data-focused. It feels like a decision-support or policy dashboard.

Is aged care near me any good?

Check my neighbourhood

Type your area name (SA3)

Each SA3 is coloured by care_gap_index — the ratio of access rate to quality score. Darker = more underserved. Two patterns emerge: high-access/low-quality metro areas and low-access/high-quality remote areas.

Who runs the best facilities?

Quality differences are not explained by geography — they are explained by ownership. Government facilities average 4.21 vs for-profit 3.68 (gap = 0.53 pts). Remote areas score higher because they have fewer for-profit providers.

Did the Oct 2023 staffing mandate work?

Yes — but only for inputs, not outcomes. National quality rose +0.25 pts (3.40 → 3.65, +7.3%) after Oct 2023. Staffing sub-rating jumped +0.51 pts — the largest gain. But quality measures (resident health outcomes) are flat at −0.015 pts. The mandate fixed staff hours; it has not yet fixed care.
